SUMMARY. In this study, a simple, rapid and sensitive ultra performance liquid chromatography tandem mass spectrometry (UPLC-MS/MS) method is described for determination of linezolid in rat plasma samples using diazepam as the internal standard (IS) from pharmacokinetic assays. Sample preparation was accomplished through a simple protein precipitation with acetonitrile, and chromatographic separation was performed on an Acquity BEH C18 column (2.1×50 mm, $1.7 \mu\text{m}$) with gradient profile at a flow of 0.4 mL/min . The linearity of this method was found to be within the concentration range of 10 - 10000 ng/mL for linezolid in rat plasma. Only 3.0 min was needed for an analytical run. The method was applied to a pharmacokinetic study of linezolid in rats.

RESUMEN. En este estudio se describe un método simple, rápido y sensible de espectrometría de masas en tandem con cromatografía líquida de ultra desempeño (UPLC-MS/MS) para la determinación de linezolid en muestras de plasma de rata, usando diazepam como patrón interno (IS) a partir de ensayos farmacocinéticos. La preparación de la muestra se llevó a cabo a través de una sencilla precipitación de proteínas con acetonitrilo y la separación cromatográfica se realizó en una columna Acquity BEH C18 (2.1×50 mm, $1.7 \mu\text{m}$) con perfil de gradiente a un caudal de 0.4 mL/min . La linealidad de este método estaba dentro del intervalo de concentración de 10 a 10.000 ng/mL para linezolid en plasma de rata. Se necesitaron sólo 3.0 min para realizar el análisis. El método se aplicó a un estudio farmacocinético de linezolid en ratas.

KEY WORDS: linezolid, pharmacokinetic, rat plasma, UPLC-MS/MS.
